

Personal website updates

<http://www.erikbrockbank.com/>

Where the code lives

```
cd /Users/erikb/web_projects/website
```

More details on this dir:

Making Changes

New git branch

```
git checkout -b [BRANCH NAME]
```

Testing

Run server locally:

```
python main.py
```

Go to port indicated by running main.py as above

ex. * Running on <http://0.0.0.0:33507/> (Press CTRL+C to quit)

→ go to <http://localhost:33507/>

Change Code and Test

Steps:

1. Create a new branch as described above
2. Make changes
3. Test by running the server as described above
4. Cntrl-C to stop the server when making new changes
5. Repeat 2-4 as needed

Landing Changes

Steps:

1. `git add -A`
2. `git commit -am "[MESSAGE]"`

If changes were made on master

3. `git push heroku master`

If they were made on a separate branch

3. `git push heroku [BRANCH]:master`
